

ECHS FRAUD ANALYTICS

MODULE 13: HIGH-VALUE CLAIM RISK SCORING

Claims above Rs 5 Lakh | Rule-Based Signals + Composite Risk Score

IIT KANPUR x ECHS DIRECTORATE

DATABASE SCOPE

74,593 high-value claims | Rs 5,631 Cr total exposure

COVERAGE

Last 5 years | claim_intimation + claim_submission

METHODOLOGY

Rule-based signals + transparent composite risk score

CLASSIFICATION

RESTRICTED - OFFICIAL USE ONLY

EXECUTIVE SUMMARY

Module 13 targets the highest-financial-risk stratum of the ECHS claim ecosystem: individual claims exceeding **Rs 5 lakh** per admission, analysed across the **last five years**. Each claim, hospital login and beneficiary card is scored with a transparent, rule-based composite risk score (0-100); no black-box model is used, so every score is auditable. **Total Financial Exposure** is the gross claimed value of the flagged claims - an approximate figure; the actual recoverable amount is determined after audit.

NOTE: Every flagged case is an investigative lead, not a confirmed finding. A qualified auditor must review each case before any action is taken.

Key Metric	Value
High-value claims (> Rs 5 L)	74,593
Total financial exposure (high-value)	Rs 5,630.76 Cr
Total deducted (high-value)	Rs 1,785.08 Cr (31.7%)
Claims approved at Rs 0 (100% deducted)	9,717
HV claims with NULL / anomalous hospital ID	23,959 (Rs 1,729 Cr exposure)
Highest single claim	Rs 0.99 Cr
Hospital logins flagged (avg ded > 25%)	392
Chronic repeat claimants (>= 3 HV claims)	3,135
Same-day duplicate claim groups	71
Bulk claim-injection events	19 (system-compromise tier: 5)

By composite risk band: 132 beneficiary cards and 15 hospital logins fall in the CRITICAL/HIGH tiers and head the verification queue. Flagged claims span 2011-09-08 to 2026-03-31.

Four systemic patterns concentrate the risk:

- **Hospital-level systematic overcharging** - login **parkhosg** accounts for Rs 64.43 Cr of deductions across 2399 high-value claims.
- **100% deduction claims** - 9,717 high-value claims were approved at Rs 0, i.e. billed far beyond the ECHS package ceiling.
- **Chronic repeat claimants** - e.g. BHUPAL SINGH (card 000001724273) with 117 high-value claims, Rs 7.13 Cr exposure.
- **Bulk claim injection** - GURJIT SINGH shows 546 intimation IDs created in a single day at p.fatesahi (system-level event).

Methodology & Data Sources

Data. High-value claims (gross claimed > Rs 5 lakh) over the **last five years**, taken from the ECHS claim_intimation and claim_submission tables and joined on the intimation ID. Regional figures use the pre-aggregated settlement_stat table.

Claim pipeline. A claim moves through intimation (admission notified) -> submission (hospital bills the gross amount) -> UTI audit (an approved amount is set; the balance is the deduction) -> settlement. **Deduction %** = (gross claimed - approved) / gross claimed; a 100% deduction means the audit approved nothing on a multi-lakh bill - a strong signal of billing beyond the ECHS package ceiling.

Risk score. Every claim, hospital login and beneficiary card receives a transparent 0-100 weighted score - no machine learning, so every point is reconstructable from the source rows. Bands: **CRITICAL** >= 70, **HIGH** 45-69, MEDIUM < 45. The exact component weights are listed in the Composite Risk Score section.

Key definitions

Term	Definition
High-value claim	Gross claimed amount > Rs 5,00,000 for one admission
Deduction %	(gross claimed - UTI approved) / gross claimed x 100
Chronic repeat claimant	One beneficiary card with >= 3 high-value claims
Single-hospital lock-in	Share of a card's high-value claims at one hospital login
Bulk injection (tiers)	>300 same-day intimations = system compromise; 100-300 = account abuse; 50-100 = watch
Anomalous hospital ID	NULL, -1/0 placeholder, or a numeric/phone-like value (not a real login)
Total Financial Exposure	Sum of gross claimed on flagged claims (approximate; recovery set at audit)

Limitations & Assumptions

- **Red flags, not verdicts.** Every item is an automated investigative lead, not a confirmed finding. A qualified auditor must verify each case before any action.
- **Deduction is not fraud.** A high deduction can reflect a legitimate package ceiling, a coding error, or incomplete documentation - it flags where billed value was removed, not why.
- **Login codes are identifiers.** Hospital login codes (e.g. parkhosg, pol.3325) are used as identifiers only; this report does not assert their real-world hospital identity.
- **Data quality.** Findings depend on the accuracy of the intimation/submission tables and the UTI deduction codes; systemic gaps (e.g. missing hospital IDs) can both create and hide signals.
- **Scope.** Analysis covers the last five years only; older claims are out of scope by design.

ALL CASES REQUIRE VERIFICATION BY QUALIFIED AUDITORS BEFORE ANY ACTION IS TAKEN.

KEY FRAUD SIGNALS

Derived directly from the last-5-year scan. Risk band reflects the composite score.

#	Signal	Finding	Risk
1	Largest single high-value claim	Rs 99.48 L at hos.3651 (HEM JOSHI); 100.0% deducted.	CRITICAL
2	Highest hospital deduction rate	pol.3325: 74.34% avg deduction on 74 high-value claims.	CRITICAL
3	Largest absolute hospital deduction	parkhosg: Rs 64.43 Cr deducted across 2399 claims.	HIGH
4	100% deduction claims	9,717 high-value claims approved at Rs 0 - billing beyond package ceiling.	HIGH
5	Same-day duplicate billing	BHISHAM DEO SHUKLA (card CH000003881057): 2 identical Rs 32.73 L claims on 2022-11-11.	CRITICAL
6	Chronic repeat claimant	BHUPAL SINGH (card 000001724273): 117 HV claims, Rs 7.13 Cr exposure, 86% at fortis@D1.	CRITICAL
7	Extreme bulk claim injection	GURJIT SINGH: 546 intimation IDs in one day at p.fatesahi (SYSTEM COMPROMISE).	CRITICAL
8	Anomalous / missing hospital identifiers	23,959 high-value claims (Rs 1,729 Cr) carry NULL or numeric (phone-like) hospital IDs - probable ghost admissions.	HIGH

Case Studies

Representative cases drawn directly from the flagged data. Names and card numbers are shown as recorded; each is a lead for verification, not a verdict.

Case 1 - Chronic Repeat Claimant

Beneficiary	BHUPAL SINGH (card 000001724273)
Pattern	117 high-value claims; 86% at one login (fortis@D1)
Exposure	Rs 7.13 Cr claimed / Rs 6.73 Cr approved (5.5% deducted)
Window	2021-10-05 to 2026-03-20 (~54 months; on average one admission every 14 days)

BHUPAL SINGH filed **117 separate high-value claims** in about 54 months - on average one admission every **14 days** - with 86% at a single login. The low 5.5% deduction means most claims pass audit, so the test is documentary: either a genuine chronic condition needing case management, or manufactured admission episodes generating a fresh base fee each time.

Action: pull discharge summaries for a 20-claim sample and reconcile admission dates / ICU notes with the billed episodes (14 days).

Case 2 - Ghost-Hospital Repeat Claimant

Beneficiary	AJAYA KUMAR NAYAK (card 000005455660)
Pattern	45 high-value claims, primary hospital ID = NULL (untraceable)
Exposure	Rs 5.96 Cr claimed (28.9% deducted)

Every one of AJAYA KUMAR NAYAK's 45 high-value claims (Rs 5.96 Cr) carries no traceable hospital ID. High-value admissions with no identifiable provider are a classic **ghost-admission** pattern; the partial deduction shows the system flags but does not fully reject them.

Action: trace the actual servicing facility from settlement/bank records; if none exists, treat as fabricated claims (30 days).

Case 3 - Same-Day Duplicate Billing

Beneficiary	BHISHAM DEO SHUKLA (card CH000003881057)
Duplicate	2 identical Rs 32.73 L claims on 2022-11-11 at 8983336860
Intimation IDs	23367707, 23367744

The same card, same admission date and same amount (Rs 32.73 L) were submitted under 2 different intimation IDs - the textbook signature of duplicate billing to collect reimbursement more than once.

Action: confirm whether more than one submission was paid and recover the surplus; sweep this login for other same-day duplicates (7 days).

Case 4 - Possible Card-ID Manipulation

Beneficiary	AMRIT LAL CHADHA
Two cards	DL1000004517957 vs DL2000004517957 (differ by one character)
Combined	7 high-value claims, Rs 2.00 Cr, at p.delhicnt

The same beneficiary name appears on two card numbers that differ by a single character (**DL1000004517957** vs **DL2000004517957**). This can indicate duplicate card issuance / card-ID manipulation used to split a fraud trail across two IDs - or, less likely, two distinct people sharing a common name. It is a lead, not a conclusion.

Action: verify both cards against the service record - one pensioner or two? (immediate).

Case 5 - Extreme Bulk Claim Injection

Beneficiary	GURJIT SINGH
Event	546 intimation IDs in ONE day (2022-08-04) at p.fatesahi
ID range	21939246 - 21939907 (near-consecutive)
Tier	SYSTEM COMPROMISE

546 claim-intimation records created for one card on a single day is far beyond manual web-portal entry. The near-consecutive ID range is the signature of programmatic batch insertion - i.e. portal credential compromise or insider database access, not ordinary claim fraud.

Action: obtain portal access logs (IP/session/timestamps) for that date, suspend the login, and escalate to ECHS IT / CERT-In (immediate).

Q13a - Top High-Value Individual Claims (> Rs 5 Lakh)

Ranked by gross claimed amount (= exposure). **Ded%** = (claimed - approved) / claimed. A 100% deduction means the approval stage recorded zero approved - a signal of billing far beyond the ECHS package rate.

Ghost & Anomalous-Hospital Claims

High-value claims whose hospital ID is missing (NULL), a placeholder, or a phone number - i.e. no traceable provider. These are prime ghost-admission leads.

Beneficiary	Hospital ID	Type	Admission	Exposure	Ded%
SURENDRA SINGH	6206305629	Phone-like	2023-04-06	Rs 86.88 L	100.0
PAWAN KUMAR	NULL	NULL (missing)	2025-10-18	Rs 65.48 L	100.0
NIRANJAN DAS	8327741223	Phone-like	2025-07-18	Rs 62.24 L	100.0
APURBA MAITY	9757020120	Phone-like	2025-12-03	Rs 58.11 L	100.0
OM SINGH	NULL	NULL (missing)	2025-01-06	Rs 58.10 L	100.0
VIJAI BAHADUR YADAVA	NULL	NULL (missing)	2025-06-07	Rs 48.11 L	100.0
SUMER SINGH	NULL	NULL (missing)	2024-02-08	Rs 45.87 L	100.0
SHAIK RIYAJ BASHA	NULL	NULL (missing)	2025-08-21	Rs 45.16 L	100.0
GORE DEVIDAS BHIKAJI	NULL	NULL (missing)	2023-05-18	Rs 44.92 L	100.0
TIBURCIO MENEZES	7039463672	Phone-like	2023-12-06	Rs 43.36 L	100.0
GAJENDER SINGH TOMAR	NULL	NULL (missing)	2025-02-28	Rs 41.35 L	100.0
HEM CHANDRA	NULL	NULL (missing)	2024-04-27	Rs 40.92 L	100.0

Q13b - Hospital Risk Scorecard (Avg Deduction > 25%)

Hospital logins with at least 10 high-value claims and an average deduction above 25%, ranked by absolute deduction. High deduction rates indicate systematic billing above admissible ECHS rates.

Score	Hospital Login	HV Claims	Exposure	Deducted	Avg Ded%	100% Ded
HIGH 60.2	parkhosg	2399	Rs 186.91 Cr	Rs 64.43 Cr	34.47	224
HIGH 57.6	metro	892	Rs 80.90 Cr	Rs 42.12 Cr	52.07	242
HIGH 45.4	metrc2	1317	Rs 103.19 Cr	Rs 35.41 Cr	34.32	116
HIGH 45.0	medantae	1017	Rs 94.52 Cr	Rs 33.32 Cr	35.25	136

Hospital deep-dives

parkhosg - 2,399 high-value claims, Rs 186.91 Cr exposure, Rs 64.43 Cr deducted (34.47% average), of which **224** were approved at Rs 0. Beneficiaries with a 100% deduction here include SPS PANWAR (Rs 28.66 L), BHARAT SINGH (Rs 25.00 L), SATVIR SINGH (Rs 24.41 L), VIJAY KUMAR (Rs 22.29 L), BEH RAM SINGH (Rs 21.95 L), SOHAN LAL (Rs 19.20 L). Different beneficiaries at one login all hitting 100% deduction points to systematic billing above the package ceiling rather than isolated patient fraud.

metro - 892 high-value claims, Rs 80.90 Cr exposure, Rs 42.12 Cr deducted (52.07% average), of which **242** were approved at Rs 0. Beneficiaries with a 100% deduction here include ROHTASH KUMAR (Rs 73.32 L), OMKAR SINGH (Rs 54.84 L), SURYA KANT (Rs 53.74 L), PARMOD (Rs 52.54 L), TEJ RAM (Rs 47.32 L), NARANDER NATH SHARMA (Rs 45.98 L). Different beneficiaries at one login all hitting 100% deduction points to systematic billing above the package ceiling rather than isolated patient fraud.

metrc2 - 1,317 high-value claims, Rs 103.19 Cr exposure, Rs 35.41 Cr deducted (34.32% average), of which **116** were approved at Rs 0. Beneficiaries with a 100% deduction here include DARWAN SINGH (Rs 33.79 L), ATTAR SINGH (Rs 31.44 L), CHANDER DHAR (Rs 28.22 L), BRAHMA CHANDRA (Rs 25.71 L), RAM ISHWAR BHAGAT (Rs 24.27 L), RAGHUVIR SINGH (Rs 23.92 L). Different beneficiaries at one login all hitting 100% deduction points to systematic billing above the package ceiling rather than isolated patient fraud.

ECHS polyclinic login pattern

Login codes of the form **p.** / **pol.** (ECHS polyclinics) carry 4,499 high-value claims with Rs 237.10 Cr deducted at a 57.53% average - far above private-hospital norms. Highest-deduction polyclinic logins: p.giddalur (81.56%), pol.3341 (80.15%), p.kumba (76.96%), p.agra1 (75.19%), p.golconda (75.05%). Polyclinic credentials routing high-value IPD claims that are then almost entirely rejected suggests these internal channels are being used to bypass pre-authorisation controls.

Q13c - Regional Risk Distribution

Region-level claimed value and deduction rate (from the pre-aggregated settlement statistics). A region-level proxy: high deduction rates flag commands where claim scrutiny is removing a large share of billed value.

Region	ECHS Command	Claims	Exposure	Deducted	Ded%
1	NEW DELHI	2,477,067	Rs 5,260 Cr	Rs 482 Cr	9.17
9	PUNE	957,803	Rs 4,243 Cr	Rs 280 Cr	6.6
4	BANGALORE	1,398,702	Rs 3,640 Cr	Rs 210 Cr	5.76
8	JAIPUR	1,388,115	Rs 3,295 Cr	Rs 555 Cr	16.84
29	Region 29	1,919,597	Rs 3,033 Cr	Rs 349 Cr	11.5
27	Region 27	1,053,792	Rs 2,730 Cr	Rs 306 Cr	11.19
24	Region 24	659,799	Rs 2,015 Cr	Rs 192 Cr	9.54
30	Region 30	918,795	Rs 1,377 Cr	Rs 125 Cr	9.08
7	DEHRADUN	1,436,946	Rs 1,286 Cr	Rs 88 Cr	6.81
2	MUMBAI	1,944,603	Rs 1,199 Cr	Rs 88 Cr	7.3
3	KOLKATA	670,906	Rs 1,029 Cr	Rs 143 Cr	13.93
17	Region 17	646,784	Rs 860 Cr	Rs 92 Cr	10.7
6	CHENNAI	271,050	Rs 826 Cr	Rs 155 Cr	18.81
5	HYDERABAD	526,668	Rs 713 Cr	Rs 88 Cr	12.31
12	PATNA	350,304	Rs 685 Cr	Rs 38 Cr	5.57
15	Region 15	466,128	Rs 680 Cr	Rs 55 Cr	8.05

Regional implications

CHENNAI shows the highest deduction rate (18.81%) - the command where claim scrutiny removes the largest share of billed value. **NEW DELHI** carries the largest absolute exposure (Rs 5,260 Cr): a concentration of high-volume hospital logins makes it the biggest absolute leakage surface even at a moderate rate. High-deduction commands warrant a region-level audit of their top high-value hospitals.

Q13d - Chronic Repeat High-Value Claimants (>= 3 Claims)

Beneficiary cards with three or more high-value claims, ranked by total claimed. **Lock-in** = share of claims at a single hospital; a high lock-in with many claims is the strongest repeat-claimant signal.

Score	Beneficiary	Card	Claims	Exposure	Deducted	Primary Hosp	Lock-in	Span
CRITICAL 81.6	BHUPAL SINGH	000001724273	117	Rs 7.13 Cr	Rs 0.39 Cr	fortis@D1	86%	21-10..26-03
CRITICAL 74.0	AJAYA KUMAR NAYAK	000005455660	45	Rs 5.96 Cr	Rs 1.72 Cr	NULL	100%	21-12..25-11
HIGH 65.5	PIARE LAL	000004046297	49	Rs 5.55 Cr	Rs 0.38 Cr	NULL	69%	21-07..26-02
HIGH 63.6	JOGINDER SINGH	000003916849	72	Rs 4.21 Cr	Rs 0.09 Cr	medantae	69%	22-08..26-03
HIGH 63.4	MALKIT SINGH	000006128034	59	Rs 3.48 Cr	Rs 0.00 Cr	FHLDH123	84%	23-06..25-12
HIGH 57.6	PUSHKAR SINGH JET...	000004735826	53	Rs 3.10 Cr	Rs 0.02 Cr	medantae	69%	23-10..26-01
HIGH 60.5	KASHMIR SINGH	000003083761	52	Rs 3.06 Cr	Rs 0.00 Cr	echsfefa	82%	23-08..25-12

HIGH 52.1	BHAJAN LAL	000006965080	39	Rs 2.38 Cr	Rs 0.00 Cr	capitol1	66%	24-03..25-10
HIGH 54.9	PITRAM SINGH	000005476164	38	Rs 2.37 Cr	Rs 0.02 Cr	sksoni	78%	23-12..25-08
HIGH 56.7	RAJINDER SINGH	000005778375	40	Rs 2.35 Cr	Rs 0.26 Cr	msshshb1	85%	24-01..26-03

Single-hospital lock-in

Natural medical histories spread across providers. Near-perfect single-hospital concentration over dozens of high-value admissions is the strongest repeat-claimant signal - it points to a fixed beneficiary-hospital relationship that should be examined for any financial arrangement. Examples: MALKIT SINGH (59 claims, 85% at FHLDH123); KASHMIR SINGH (52 claims, 83% at echsfefa); RAJINDER SINGH (40 claims, 85% at msshshb1).

Q13f - Extreme Bulk Claim Injection (Same-Day Mass Intimation)

Hundreds of claim-intimation records created for a single card, on a single day, at a single hospital login - far beyond manual entry. Tiers: **>300** = system compromise, **100-300** = account abuse, **50-100** = watch. Near-consecutive intimation IDs confirm programmatic batch insertion.

Beneficiary	Card	Hospital	Date	Intimations	ID Range	Tier
GURJIT SINGH	CM000002580629	p.fatesahi	2022-08-04	546	21939246-21939907	SYSTEM COMPROMISE

Why this matters

The top event - **GURJIT SINGH** at **p.fatesahi** on 2022-08-04 - created **546 intimation IDs in a single day**, spanning IDs 21939246-21939907 (near-consecutive). Creating hundreds of records in one day is impossible through manual web-portal entry; near-consecutive ID ranges are the signature of programmatic batch insertion - portal credential compromise or insider database access, not ordinary claim fraud.

These 19 events span **9 distinct card-prefix codes** (each encoding an issuing ECHS region, including Delhi, Mumbai, Hyderabad, Kerala) - so this is not a single compromised login but a multi-region pattern. Response: pull portal access logs (IP, session, timestamps) for these dates and escalate to ECHS IT / CERT-In as a security incident.

Composite Risk Score - Methodology

Each claim, hospital login and beneficiary card receives a transparent weighted score from 0-100. The score is a plain weighted sum of normalised signals - fully explainable, no machine-learning black box. Bands: **CRITICAL** >= 70, **HIGH** 45-69, MEDIUM < 45.

Claim-level score

Component	Weight
Deduction	35
Magnitude	25
Full Deduction	15
Same Day Duplicate	15
Anomalous Hospital	10

Hospital-level score

Component	Weight
Avg Deduction	40
Absolute Deducted	30
Volume	15
Full Deduction Share	15

Claimant-level score

Component	Weight
Volume	35
Single Hospital Lockin	25
Total Claimed	25
Bulk Injection	15

Strategic Recommendations

Prioritised by composite risk and tied to the specific cases surfaced above. SLAs are indicative response windows.

Priority	SLA	Recommendation	Action
CRITICAL	Immediate	Portal-security investigation of bulk injection	GURJIT SINGH created 546 intimation IDs in one day at p.fatesahi. Pull portal access logs (IP/session) for all 19 events, suspend the involved logins, and escalate to ECHS IT / CERT-In.
CRITICAL	7 days	Recover same-day duplicate payments	BHISHAM DEO SHUKLA: 2 identical Rs 32.73 L claims on 2022-11-11 at 8983336860. Confirm which submissions were paid, recover the surplus, and sweep that login for other same-day duplicates.
CRITICAL	14 days	Physically verify the top chronic claimant	BHUPAL SINGH - 117 high-value claims at fortis@D1. Obtain discharge summaries for a 20-claim sample and reconcile admission dates / ICU notes.
CRITICAL	Immediate	Investigate possible card-ID manipulation	AMRIT LAL CHADHA appears on two near-identical cards (DL1000004517957 / DL2000004517957). Verify against the service record - one pensioner or two?
HIGH	60 days	Empanelment & billing audit of the top-deduction hospital	parkhosg - Rs 64.43 Cr deducted across 2,399 claims (224 at 100%). Audit the empanelment package rates and a 10-claim line-item sample.
HIGH	60 days	Segregate ECHS polyclinic claim channels	Polyclinic logins carry 4,499 high-value claims at 57.53% deduction. Restrict polyclinic logins to OPD/pharmacy and quarantine high-value IPD claims submitted through them.
HIGH	30 days	Reject invalid hospital identifiers at intake	23,959 high-value claims (Rs 1,729 Cr) carry NULL or phone-like hospital IDs. Block submission where the hospital ID is not a valid portal login.
MEDIUM	Ongoing	Operationalise the risk score	Run the composite score nightly and route CRITICAL-band claims to auditors before settlement.

This report is produced by an automated screening system. Every flagged case is an investigative lead, not a confirmed finding, and must be reviewed by a qualified auditor before any action is taken.
