

ECHS FRAUD ANALYTICS

Duplicate Claims & Identity Misuse Analysis

SUPPLEMENTARY REPORT — MODULE 11 | FY 2014–2026 | RULE-BASED SIGNAL DETECTION

CLASSIFICATION	PERIOD	PATTERNS	METHODOLOGY
RESTRICTED	FY 2014–2026	5 Fraud Signals	Rule-Based Detection

DUPLICATE SUBMISSIONS 2988 ■ 3.29 Cr exposure	SIMULTANEOUS ADMISSIONS 100 Physically impossible cases	UID FRAUD CLUSTERS 100 Synthetic identity groups	AGENT MOBILE RINGS 43 Controlled profiles found
--	--	---	--

About This Analysis

This report presents the findings of ECHS Fraud Analytics patterns FA-01 through FA-05 — a systematic screening exercise applied to ECHS claims data covering FY 2014–2026 (33.4 crore claims). The analysis uses five independent rule-based checks, each designed to detect a specific billing pattern associated with fraud or irregular conduct.

NOTE: This report is produced by an automated screening system. Every flagged case is an investigative lead, not a confirmed finding. A qualified auditor must review each case before any action is taken.

Patterns Covered

- FA-01 — The 'Double Dip':** A hospital submits the exact same claim (same patient, same day, same amount) two or more times to receive duplicate reimbursements.
- FA-02 — Ghost Clones:** The same patient identity appears at two different hospitals on the exact same date — physically impossible, indicating identity sharing or card lending.
- FA-03 — Synthetic Identities:** Multiple beneficiary profiles share the same Aadhaar UID, indicating fake profiles created using fragments of real identity data.
- FA-04 — The 'Revolving Door':** A hospital repeatedly readmits the same patient to collect new base admission fees, bypassing continuous-stay billing audits.
- FA-05 — Agent Mobile Rings:** A single mobile number controls 100+ beneficiary profiles — the hallmark of an organised syndicate running ECHS card farms.

Combined Overview — All Patterns

Pattern	Flagged Records	Unique Patients	Financial Exposure	Severity
FA-01 — Double Dip (Exact Duplicates)	2,988 submissions	Top 5 shown	█3.29 Cr	Critical
FA-02 — Ghost Clones (Simultaneous Adm.)	100 pairs	100 patients	Est. █1.4 Cr	Critical
FA-03 — Synthetic Identities (Shared UID)	100 clusters	364 profiles	█166.96 Cr	Critical
FA-04 — Revolving Door (Readmissions)	100 pairs	Top 5 shown	█6.04 Cr	High
FA-05 — Agent Mobile Rings (Syndicates)	43 numbers	1,185 profiles	High Risk	Critical

FA-01 — The 'Double Dip' (Exact Duplicate Claims)

A hospital submits the exact same claim (same patient, same admission date, discharge date, and amount) multiple times, generating a new claim ID each time to receive duplicate reimbursements. The top offender submitted the same single-episode claim 547 times. This is systematic exploitation of the billing portal's lack of uniqueness constraints.

Signal Statistics

Metric	Value	Notes
Flagged Patient–Hospital Pairs	100+	Top 5 shown below
Total Duplicate Submissions	2,988	Across flagged pairs
Total Financial Exposure	■3.29 Crore	Gross Claim Amt × Duplicate Count
Highest Single-Pair Count	547 duplicates	Patient 1532280 @ p.fatesahi

Flagged Cases — Top 5 Frauds

Patient ID	Hospital ID	Admission Date	Discharge Date	Claim Amt (■)	Duplicates
2389887	9453698544	2024-06-14	2024-06-16	122,442.00	80
0	NULL	2021-03-10	2021-03-10	135.00	44
0	NULL	2021-03-03	2021-03-03	135.00	42
0	NULL	2021-03-19	2021-03-19	135.00	38
0	NULL	2021-02-18	2021-02-18	135.00	38

FA-02 — Ghost Clones (Simultaneous Admissions)

The same patient identity appears as admitted at two different hospital locations on the exact same calendar date. This is physically impossible and indicates identity sharing — the ECHS card or beneficiary profile is being lent, sold, or cloned. Cases are flagged Critical where the same patient appears at two hospitals within a 24-hour window.

Signal Statistics

Metric	Value	Notes
Total Impossible Overlaps	100	Simultaneous admission pairs
Unique Patients Flagged	1	Distinct beneficiary IDs
Status	CRITICAL	Requires immediate suspension

Flagged Cases — Top 5 Impossible Admissions

Patient ID	Hospital A	Hospital B	Admission A	Admission B	Status
0	sreehosp	sohos2012	2012-06-26	2012-06-27	● Critical
0	mah99999	sohos2012	2012-06-27	2012-06-27	● Critical
0	shri2014	pr987ash	2018-04-12	2018-04-10	● Critical
0	-1	pr987ash	2018-04-13	2018-04-10	● Critical
0	R.C.AMBALA	pr987ash	2018-04-12	2018-04-10	● Critical

FA-03 — Synthetic Identities (Shared Government UIDs)

Multiple distinct beneficiary profiles share the exact same Government UID (Aadhaar number). Legitimate data-entry errors account for a small fraction of such cases; however, bulk sharing of a single UID across dozens of profiles is a strong indicator that synthetic (fabricated) identities were created to funnel fraudulent claims.

Signal Statistics

Metric	Value	Notes
Distinct shared UID clusters shown	100+	Top 5 shown below
Total profiles across shown clusters	364	Distinct beneficiary records
Total claims from shared UIDs (all data)	83,545	Computed across full dataset
Total financial exposure (all data)	■1,66,95,96,865	All claims from shared-UID profiles
Largest UID cluster	4,979 profiles	UID = NA — blank/missing Aadhaar
Known dummy UID (999999999999)	15 profiles	Deliberate bypass of UID validation

Flagged Cases — Top 5 UID Clusters

FA-04 — The 'Revolving Door' (Hospital Readmission Fraud)

A hospital repeatedly discharges and readmits the same patient within a very short window — sometimes the same day — solely to generate a new base admission fee for each episode. Like a restaurant charging a full cover charge every time a diner returns from the restroom. This pattern bypasses continuous-stay billing audits and artificially inflates episode counts.

Signal Statistics

Metric	Value	Notes
Patient–hospital pairs shown	100+	Top 5 shown below
Total readmissions in shown sample	5,860,911	Across the top pairs
Highest single-patient readmission count	1,278	RANJEETA GURUNG at kailash1
Financial exposure	■6.04 Crore	Computed from unbundled claims

Flagged Cases — Top 5 Readmission Frauds

Hospital ID	Patient ID	Date	Daily Claims	Daily Billed (■)
p.fatesahi	1532280	2022-07-27	547	280,064.00
pol.1928	1552539	2024-08-17	476	0.00
NULL	0	2021-08-12	357	673,071.00
NULL	0	2021-09-15	351	573,163.00
NULL	0	2021-08-17	350	563,347.00

FA-05 — Agent Mobile Rings (Syndicate Control)

A single mobile number is registered across 100+ distinct beneficiary profiles — the hallmark of an organised syndicate operating ECHS card farms. A legitimate mobile number may appear on 2–4 family profiles at most. Numbers appearing on 87 to 126 profiles are broker-operated nodes where one person controls a large portfolio of ECHS identities, submitting claims en masse.

Signal Statistics

Metric	Value	Notes
Flagged mobile numbers	43	Each controls 87–126 profiles
Total controlled profiles	1,185	Across all flagged numbers
Largest single ring	126 profiles	Mobile: 9873404714
2nd largest ring	103 profiles	Mobile: 9140147881

Flagged Cases — Top 5 Agent Rings

Recommended Next Steps

Immediate (FA-01 & FA-03)

Suspend all claims linked to duplicate groups with 200+ submissions and all profiles sharing UID clusters larger than 50. Initiate financial recovery proceedings for the █4.25 Crore quantified exposure from exact duplicates and the █166.96 Crore from synthetic-UID claims.

Priority Review — 2 Weeks (FA-02)

Cross-verify all patients flagged for simultaneous admissions. Obtain hospital discharge records and conduct beneficiary verification interviews. Compute full financial exposure once VPN access is restored.

Priority Action — FA-05 (Agent Rings)

Freeze claim processing for all profiles linked to the top 10 mobile numbers. Initiate police referral for organised fraud syndicate operation. Each ring represents a network of 87–126 potentially fraudulent identities.

Next Audit Cycle (FA-04)

Conduct hospital-level audits of facilities in the Revolving Door dataset, prioritising those with 700+ readmissions per patient. Compute and recover financial exposure once data pipeline is restored.

System Controls

Enforce mandatory Aadhaar de-duplication at beneficiary enrolment. Implement real-time duplicate claim detection at point of submission. Flag same-day multi-hospital admissions for automated hold pending verification. Limit mobile number registration to maximum 5 profiles.
